Definition of an electronic carrier: A type of cable, usually including a set of conductors, and in certain cases an enclosed dielectric, used to carry an electric current. Most modern cable is a sheath of mylar or other film that encloses an inner core of copper wire. Some types of cable that are called electronic carrier, which are quite specialized and low in voltage, are used for power distribution systems and other very specific applications. [Fiction] Definition of the carriers: Bj. 23 2/7 july 2010. Lpg
